

# SharePoint Advanced Management

## Data Access Governance Review

### Federal Publications Modernization Program

#### Six-site Copilot readiness review

TRAINING SIMULATION - All sites, people, records, labels, permissions, and approvals in this packet are fictional. This is not a GPO assessment, a live tenant report, or an unmodified Microsoft export.

| Report control              | Value                                                                                                                                                                              |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Case / version              | SAM-2026-0925 / 1.0                                                                                                                                                                |
| Prepared for                | Program governance review board; fictional GPO/GCC training environment                                                                                                            |
| Scope                       | Six selected SharePoint sites; approximately 21,090 files. OneDrive, email, Teams chats, and other sites are outside this packet.                                                  |
| Snapshot / activity sources | Snapshot generated 25 Sep 2026 08:00 UTC; watermark 23 Sep 08:00 UTC. Activity generated 24 Sep 08:00 UTC; window: 27 Aug 00:00 through 24 Sep 00:00 UTC, end exclusive (28 days). |
| Supplemental checks         | 25 Sep 2026, 10:00-15:00 UTC. These can be newer than the SAM snapshot.                                                                                                            |
| Prepared by                 | Collaboration Services Review Desk. Program decisions are not pre-scored.                                                                                                          |

### Review context

The program plans to expand Copilot-assisted briefing preparation. The review board has capacity for two coordinated access-remediation work packages today. Other concerns still require an owner, interim handling, and a follow-up date. Approved public-information publishing must remain available.

### Evidence provenance

DAG = synthetic values modeled on documented SAM snapshot and activity report fields. SUP = supplemental checks from fictional access reviews, directory membership, item permissions, records instructions, and change tickets. SUP fields are not claimed to be columns in a native SAM report. Microsoft references are indexed on page 8.

### Reading route

Start with the two report views on page 2 and the approved audiences on page 3. Follow record IDs into permissions and membership/link evidence on pages 4-5. Use pages 6-7 for content, ownership, and control checks. Page 8 is reference material, not required reading during the exercise.

# Current permissions and recent activity

Six selected rows from a synthetic full export. Display order is by site ID, not risk. No report row is a finding by itself.

DAG-S01 through DAG-S06 | Site permissions snapshot [M01]

| Site                     | Users with access | File count | Unique items | EEEU grants | Org links |
|--------------------------|-------------------|------------|--------------|-------------|-----------|
| S01 Public Affairs       | 1,164             | 1,840      | 12           | 1           | 97        |
| S02 Budget Planning      | 48                | 3,260      | 21           | 1           | 2         |
| S03 HR Operations        | 312               | 4,780      | 64           | 0           | 0         |
| S04 Acquisition Planning | 32                | 2,150      | 18           | 0           | 3         |
| S05 Historical Projects  | 12                | 8,420      | 7            | 1           | 0         |
| S06 Executive Planning   | 12                | 640        | 9            | 0           | 0         |

DAG snapshot common values: Anyone link count = 0 and Everyone permission count = 0 for all six sites. Guest user permissions = 0 except S04 = 6. Counts are per site and must not be summed into a tenant-wide distinct-user total.

DAG-A01 through DAG-A06 | Sharing activity, 28-day window [M02, M03]

| Site | New org links | New external specific-people links | New EEEU site grants | New EEEU item shares |
|------|---------------|------------------------------------|----------------------|----------------------|
| S01  | 42            | 0                                  | 0                    | 0                    |
| S02  | 1             | 0                                  | 0                    | 0                    |
| S03  | 0             | 0                                  | 0                    | 0                    |
| S04  | 1             | 1                                  | 0                    | 0                    |
| S05  | 0             | 0                                  | 0                    | 0                    |
| S06  | 0             | 0                                  | 0                    | 0                    |

New Anyone links = 0 for every site. Activity data collection covered the full stated window. Zero here is a verified zero for these event types, not a substitute for an absent row in a top-sites view. This is an analyst-joined six-site extract, not a screenshot of the top-100 interface.

## How to read these measures

Users with access is the snapshot's distinct-user measure at any site or item scope, not a count of people who read every file. It is not the full possible audience of EEEU or transferable links. The fictional directory contains 6,420 internal member accounts, but that population must not be substituted for the reported measure. [M01]

Unique items counts broken inheritance, which can narrow or broaden access. EEEU grants counts permission assignments, not files or users. Org links counts existing People in your organization links. Activity columns count newly created sharing events during the stated window, not all access that still exists. [M01-M03]

Watermarks and dates are on page 1. Do not interpret this snapshot as a live access test or as evidence that Copilot actually used a particular source.

## Approved purpose and audience

Business-access statements confirmed by program sponsors on 25 Sep. Counts refer to named business users, excluding emergency administrator elevation. No routine administrative elevation is active in the checks below.

| Record / site                     | Approved business audience and scope                                                                                                                                                           | Current site configuration / continuity requirement                                                                                                                                             |
|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| B01 / S01<br>Public Affairs       | All 6,420 internal member accounts may read approved public-release materials. A 22-person publishing group maintains the content. Drafts are stored elsewhere.                                | Communication site; privacy field not applicable. Site label: Public. External sharing: off. Owner: Elena Ruiz. Staff must continue finding approved fact sheets.                               |
| B02 / S02<br>Budget Planning      | 48 named Finance and program leads may access FY27 planning options. Unapproved planning alternatives are not approved for the all-staff audience.                                             | Group-connected team site; Private. Site label: Confidential. External sharing: off. Owner: Marcus Bell. Named reviewers need uninterrupted access during the budget review.                    |
| B03 / S03<br>HR Operations        | 18 named workforce-planning staff may read the Personnel Planning library, including its staffing and leave-planning workbook. Shared-services liaisons have no approved role in that library. | Group-connected team site; Private. Site label: Confidential. External sharing: off. Owner: Priya Nair. The connected group has 18 people; additional site grants appear on page 4.             |
| B04 / S04<br>Acquisition Planning | 24 named internal reviewers may access the Evaluation folder. Six authenticated vendor contacts may access only the separately released Vendor Briefing document.                              | Group-connected team site; Private. Site label: Confidential. External sharing: on. Owner: Owen Park. The vendor briefing must remain available to its approved recipients.                     |
| B05 / S05<br>Historical Projects  | 12 named records and program-review staff may access the Closeout Working library. Its internal planning files were never approved for an all-staff release.                                   | Team site without a Microsoft 365 group; privacy field not applicable. No site label. External sharing: off. Primary admin field: Danielle Cole. Lock state: Unlock; not Microsoft 365 Archive. |
| B06 / S06<br>Executive Planning   | 12 named leadership staff may read the main library. Four of those 12 may read the Secretary Notes folder. No guest access is approved.                                                        | Group-connected team site; Private. Site label: Restricted. External sharing: off. Owner: Lena Brooks. A leadership briefing is due today; preserve approved access.                            |

All label names and business-access approvals above are fictional training constructs, not official GPO policies or government classification markings. Configuration is a supplemental site-properties check, not a guarantee about every file.

# Selected permission paths

Item checks were captured 25 Sep 11:00 UTC. These are supplemental effective-permission extracts, not native DAG item rows. Paths are relative to the fictional site roots; omitted paths are not certified.

| ID / scope                            | Recorded principal and permission                                                                                      | Inheritance and affected content                                                                                                                                                   |
|---------------------------------------|------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| P01 / S01<br>Site root                | Public Affairs Visitors includes Everyone except external users: Read. Publishing group: Edit.                         | Approved Materials inherits the root. D01 inherits this audience. Twelve separately permissioned maintenance items are limited to the publishing group.                            |
| P02 / S02<br>Site root                | Budget Planning Visitors includes Everyone except external users: Read. Named budget group: Edit.                      | Planning library and D02 inherit the root. The EEEU grant was added 14 Nov 2024. The 21 unique items elsewhere do not include D02.                                                 |
| P03 / S03<br>Site root                | HR Operations Members includes the 18-person connected group and the Entra security group SG-Workforce-Liaisons: Edit. | Personnel Planning library and D03 inherit the root. SG-Workforce-Liaisons was added 10 Feb 2025. Its current membership is recorded in G02.                                       |
| P04 / S04<br>Evaluation folder        | Named internal review group: Edit. Sharing principal L02: View, People in your organization.                           | Folder has unique permissions. Eight working files, including D04, inherit this folder. The site root itself has no EEEU grant.                                                    |
| P05 / S04<br>Vendor Briefing          | Named internal review group: Edit. Specific people link L03: View for six named vendor contacts.                       | A separate released file with unique permissions. It does not grant entry to the Evaluation folder. B04 authorizes these recipients and this scope.                                |
| P06 / S05<br>Closeout Working library | Everyone except external users: Read. SG-Records-Review: Read.                                                         | Library breaks root inheritance; 216 internal working files, including D05, inherit this library. EEEU grant added 18 Jul 2022. The rest of the site is not covered by this grant. |
| P07 / S06<br>Secretary Notes folder   | SG-Executive-Secretariat: Read, four named people, including the two site owners. No other routine reader grants.      | Folder has unique permissions that remove the wider leadership reader group. D06 is in the main library, not in this folder. See C02 for the site access restriction.              |

## Scope and interpretation

A site can be Private while a separate site-level, library, folder, file, or sharing-link grant expands a particular audience. A unique-permission count alone does not identify which direction access changed. Match the principal, permission, inheritance path, and document to the approved audience on page 3. [M01, M04]

Site roots follow /sites/FPMP-<SiteName>. Example: /sites/FPMP-HistoricalProjects/Closeout Working. No usable tenant address or sharing URL is supplied.

## Membership and sharing context

Directory export and selected live-link metadata captured 25 Sep 11:30 UTC. These records explain principals and links named on page 4; they are not a complete tenant inventory.

Group membership extracts

| ID / group                   | Current membership / review evidence                                                                                                                                                                                                               |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| G01<br>HR connected group    | 18 active internal people, matching B03. The owner reviewed this connected-group roster on 22 Sep. That review did not include separately assigned SharePoint groups.                                                                              |
| G02<br>SG-Workforce-Liaisons | 312 active internal people: all 18 people in G01 plus 294 shared-services liaisons. No overlap beyond those 18. Group purpose: general workforce-service coordination. The group is a separate SharePoint grant, not a nested Microsoft 365 group. |
| G03<br>SG-Records-Review     | 12 active internal people, matching B05. Records steward Naomi Vale coordinates case preservation; she has not accepted business ownership of S05.                                                                                                 |
| G04<br>Executive groups      | SG-Executive-Leadership contains the 12 B06 people. SG-Executive-Secretariat contains four of those 12, including the two site owners. Both memberships were reviewed 24 Sep.                                                                      |

Selected link register - existing links, not newly created-link totals

| ID / item                      | Link scope and timing                                                                                    | Business context / corroboration                                                                                                                                                                                                                        |
|--------------------------------|----------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| L01 / S01<br>D01 fact sheet    | People in your organization; View. Created 19 Sep. One of 97 existing S01 org links.                     | Published through the approved all-staff information page. Release approval PA-0918 covers this version and the internal audience.                                                                                                                      |
| L02 / S04<br>Evaluation folder | People in your organization; View. Created 17 Sep. Active at check. One of three existing S04 org links. | Creator note: "Send to the six internal reviewers on the email." A service-desk check on 22 Sep recorded successful redemption by two internal production staff outside B04. The other two S04 org links target approved internal administration files. |
| L03 / S04<br>Vendor Briefing   | Specific people; View. Created 18 Sep. Active; six named external recipients.                            | Release approval ACQ-0916 covers this file and these contacts. The six account permissions explain S04 guest permissions; they do not establish access to Evaluation.                                                                                   |
| L04 / S02<br>Review calendar   | People in your organization; View. Created 10 Sep. One of two existing S02 org links.                    | Non-sensitive meeting dates approved for staff visibility. L04 does not explain or remove the inherited grant on D02. The older org link targets a staff-approved process note.                                                                         |

People in your organization links require an internal authenticated member and link possession/redemption. Creating one does not automatically make content available to every employee through Copilot. Distribution and redemption evidence matter. [M04]

# Content, currency, and accountability

Document metadata is a selected sample, not a whole-site label-coverage report. No source file contents or actual personnel records are included.

| ID / site / file                             | Content and current metadata                                                                                                                   | Approved use / record note                                                                                                        |
|----------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| D01 / S01<br>Approved_Public_Fact_Sheet.docx | Released modernization milestones. File label: Public; no encryption. Modified 18 Sep 2026.                                                    | Current approved version. Intended for all-staff reuse. Release PA-0918.                                                          |
| D02 / S02<br>FY27_Budget_Options.docx        | Unapproved funding alternatives and provisional staffing assumptions. File label: Internal; marking only, no encryption. Modified 21 Sep 2026. | B02 audience only. Not approved for release. Access inherited through P02.                                                        |
| D03 / S03<br>Personnel_Assignments.xlsx      | Named staffing assignments and leave-planning fields. File label: None; no encryption. Modified 22 Sep 2026.                                   | B03 audience only. The site has a Confidential label; this file has no item label. Access inherited through P03.                  |
| D04 / S04<br>Pricing_Review.docx             | Internal evaluation commentary and provisional cost comparisons. File label: Internal; marking only, no encryption. Modified 20 Sep 2026.      | B04 internal reviewers only. One of eight files under P04. Not the released Vendor Briefing.                                      |
| D05 / S05<br>Historical_Project_Summary.docx | Named 2022 staffing assumptions and internal planning estimates. File label: None; no encryption. Modified 31 Jan 2023.                        | Superseded by the 2024 approved closeout summary in a different controlled library. H01 below covers preservation of this source. |
| D06 / S06<br>Leadership_Briefing.docx        | Current leadership planning. File label: Restricted with encryption for the approved leadership group. Modified 24 Sep 2026.                   | Twelve approved leadership staff. No evidence in this packet of access outside that audience.                                     |

Selected lifecycle and ownership records

| ID        | Record                                                                                                                                                                                                                                                              |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| O01 / S05 | Primary admin Danielle Cole remains in site metadata; her account was disabled on 30 Jun 2025. No enabled business owner is assigned. Central SharePoint administrators remain available but have not accepted the program data-owner role.                         |
| O02 / S05 | Last recorded site activity: 31 Jan 2023. Lifecycle policy run on 24 Sep was Simulation only; no remediation or lock was applied. The site remains unlocked, online, and outside Microsoft 365 Archive.                                                             |
| H01 / S05 | Records instruction REC-2026-041, issued 15 Sep 2026: preserve S05 content for an active internal review. Do not delete or alter source content. Access tightening is permitted if the records lead verifies continued preservation and authorized reviewer access. |

All other named site owners on page 3 have enabled accounts. A container label does not automatically label the files inside it. Label status and access scope are separate questions. [M06]

## Changes and validation notes

These checks are newer than the snapshot. Successful access is not proof of wider distribution or of a Copilot response. No CopilotInteraction records or complete download history are supplied.

Change and control register

| ID / site         | Observed configuration                                                                                                                    | Ticket or review context                                                                                                                      |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| C01 / S02         | Restricted Content Discovery: on, observed 25 Sep 10:00 UTC. Underlying P02 permissions were not changed. Restricted Access Control: off. | CHG-2461: "Temporary discovery restriction while the business owner reviews access." Review ticket is open. No reassessment date is recorded. |
| C02 / S06         | Restricted Access Control: on. Allowed group: SG-Executive-Leadership (12). RCD: off.                                                     | CHG-2408: approved access boundary. Existing file and folder permissions remain in place, including narrower P07 access.                      |
| C03 / other sites | RCD: off. Restricted Access Control: off. External-sharing settings are listed on page 3.                                                 | No blanket search restriction or blanket permission change is recorded. The report supplies control status, not a guarantee of suitability.   |

SUP verification samples - performed with normal, non-admin accounts

| ID / time           | Test                                                                                                                                 | Observed result                                                                                                                                 |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| T01<br>25 Sep 13:00 | An internal Public Affairs test user outside the 48-person B02 roster follows a direct URL to D02 after C01 is enabled.              | Document opens. The user is not a budget reviewer and has no separate direct grant. P02 is the recorded path. Copilot discovery was not tested. |
| T02<br>25 Sep 13:15 | An internal test user outside SG-Executive-Leadership follows a direct URL to D06. An approved leadership reviewer repeats the test. | Outside user: access denied. Approved reviewer: document opens. No emergency administrator role is active.                                      |
| T03<br>25 Sep 13:30 | A named L03 vendor recipient opens Vendor Briefing, then follows a separately supplied direct URL to D04.                            | Vendor Briefing opens; D04 access is denied. This is one sampled identity, not a certification of all external access.                          |

### Statements entered in the review queue

RQ01 - Budget coordinator: "The discovery restriction is enabled. Please confirm whether we can close the access-review ticket."

RQ02 - HR site owner: "I reviewed all 18 members of the connected team this week."

RQ03 - Records coordinator: "The historical site must be preserved. We still need someone to accept responsibility for its access."

Each statement is a question or reported action, not a verified conclusion. RCD affects discoverability, not the underlying access grant. RAC is a separate access restriction. [M05, M07]

## Method, limits, and source register

Reference sheet for interpreting the training packet. The evidence review is complete on page 7; no hidden case facts appear here.

### Source-to-section map

| Source family              | Packet fields and evidence boundary                                                                                                                                                                                                             |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DAG-S / DAG-A              | Page 2 values follow documented snapshot and recent-sharing concepts. This packet joins selected rows by site ID. File counts are approximate; user counts are per site. This is not a full native export or an automated Microsoft risk score. |
| SUP-BASELINE / PERMISSIONS | Pages 3-4 add the business audience and selected actual grant paths. Business need and effective item access cannot be inferred solely from a site name, privacy flag, or sensitivity label.                                                    |
| SUP-DIRECTORY / LINKS      | Page 5 adds current security-group membership, sharing scope, approvals, and observed redemption. The link register is selective; it is not the denominator for page 2 totals.                                                                  |
| SUP-CONTENT / CONTROLS     | Pages 6-7 add sample file metadata, owner-account state, preservation instructions, control status, and point-in-time access tests. No full content scan, Copilot answer, or incident finding is asserted.                                      |

### Boundaries for the review

A broad grant outside the approved audience can establish an access-control mismatch without proving anyone misused it. Old or ownerless content requires governance attention; those conditions alone do not prove oversharing. Preserve uncertainty where a path or actual use has not been checked. All GCC control proposals require the organization's own licensing, rollout, role, scope, and behavior verification.

### Microsoft Learn source register

Technical references checked 28 Sep 2026. The slide deck supplies the instructional framing; these references explain reporting and control semantics. Detailed qualifications are in the separate facilitator guide.
